IFEOLUWA OREOLUWA OLUWAFEMI

Data Scientist · Machine Learning · Web3 Content Strategist

ifeoluwaoluwafemi565@gmail.com · +234 703 872 8205 · GitHub · LinkedIn · Web3 Content Portfolio

PROFILE

Data Science undergraduate with practical experience spanning machine learning engineering, blockchain on-chain analytics, and Web3 content strategy. Skilled at building end-to-end data pipelines, deploying ML models (classification, clustering, anomaly detection), and querying on-chain data, alongside a track record of producing educational content that has grown and engaged audiences across multiple Web3 protocols. Comfortable moving between writing Python for production ML pipelines and writing long-form content for DeFi communities, with delivery across internships, research, ambassador programmes, and freelance engagements.

TECHNICAL SKILLS

Languages & Libraries: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, R

Machine Learning: Classification, Regression, Clustering (K-Means, DBSCAN, Agglomerative), Anomaly Detection (Isolation Forest), Feature Engineering, Model Evaluation, SHAP Interpretability

AI / LLM: Prompt Engineering, Groq API (LLaMA 3.3 70B), LLM-based behavioral analysis, GenAI performance evaluation

Data Engineering: ETL/ELT Pipelines, REST API Integration, Web Scraping, Data Cleaning & Transformation, Flask backends

On-Chain & Blockchain: Dune Analytics (SQL), DefiLlama, SUI API, Mantle Explorer API, on-chain data pipelines, DeFi protocol monitoring

Visualization & BI: Power BI, Tableau, Streamlit, Gradio, Excel

Content & Strategy: Web3 Technical Writing, Copywriting, Content Strategy, Community Engagement, Brand Voice

Tools & Platforms: Git & GitHub, Jupyter Notebook, VS Code, Notion, Figma, X (Twitter), Railway, IBM SPSS

PROFESSIONAL EXPERIENCE

Data and Artificial Intelligence Intern *June 2026 – Present*

DRID

- Designed and led a cross-sectional research study evaluating ChatGPT-4's accuracy on 250 university-level multiple-choice questions across 4 courses (Botany, Chemistry, Mathematics, Physics) at the University of Benin, achieving 81.6% overall accuracy (204/250) against expert-validated answer benchmarks.
- Applied stratified sampling by academic domain and used IBM SPSS (chi-square tests, binary logistic regression) to statistically test performance differences across courses and identify predictors of AI response correctness.
- Uncovered significant accuracy variation across domains, from 91.4% in Botany to 77.5% in Physics and Mathematics, generating findings that directly inform assessment-redesign recommendations for AI-resilient MCQs.
- Authored a full research paper (background, literature review, methodology, and findings) contributing empirical evidence to institutional policy discussions on GenAI and academic integrity in Nigerian higher education.

Data Scientist Intern *Aug 2025 – Nov 2025*

Uniccon Group of Companies · Nigeria

- Built and deployed a K-Means customer segmentation model on mall retail data (over 200 customers), producing 5 distinct cluster profiles that directly shaped targeted marketing recommendations (full detail under Key Projects).
- Engineered end-to-end Python pipelines to scrape, clean, and structure 5,000+ Yoruba-language web pages, supporting NLP research on low-resource African languages.
- Built and deployed an interactive Gradio house price prediction app, cutting manual price-estimation time and letting non-technical stakeholders test pricing scenarios in real time.
- Ran the full ML lifecycle, from EDA to feature engineering and model evaluation, across 3+ internal projects, improving generalization through systematic cross-validation.

Brand Ambassador & Content Writer *Dec 2024 – Mar 2026*

eOracle · Remote · Web3 / DeFi

- Produced technical and educational content for a Web3 oracle protocol on X (Twitter), simplifying complex blockchain concepts for a global DeFi audience and growing community engagement [add follower/engagement growth %].
- Tracked on-chain metrics and protocol developments to publish timely, data-backed content that bridged product updates and community understanding.

- Developed a consistent brand voice across threads, long-form posts, and campaign copy, contributing to follower growth and increased ecosystem visibility.

Content Marketer *Nov 2024 – Jan 2026*

LayerZero · Remote · Web3 / Interoperability

- Posted consistent educational and engagement content across X (Twitter) and Medium, keeping the community informed on protocol updates and ecosystem developments [more than 30k impressions on X overall].
- Stayed active within the LayerZero community, engaging directly with users to strengthen brand presence, trust, and ecosystem awareness.
- Simplified cross-chain and interoperability concepts for a general audience, supporting broader understanding and adoption of the protocol.

Content Marketer *Jul 2025 – Dec 2025*

Harmonix · Remote · Web3 / DeFi

- Created and posted content across X (Twitter) and Medium to build platform awareness and attract new users to Harmonix.
- Translated protocol features and updates into accessible, engaging content that drove interest and engagement from the DeFi community.

Social Media Manager *Nov 2025 – Jul 2026*

BOB Nigeria · Nigeria

- Owned end-to-end social media strategy, planning content calendars, writing copy, and scheduling posts, resulting in measurable growth in brand reach and community interaction [From 58 followers to 1000 followers].
- Analysed platform analytics and audience behaviour data weekly to identify top-performing content formats and iterate on strategy accordingly.
- Managed community engagement across platforms, maintaining brand tone and responding to audience sentiment in real time.

Copywriter *Feb 2024 – Dec 2025*

Pitchlabs · Remote

- Delivered persuasive copy for startup pitches, product landing pages, and digital marketing campaigns across B2B and B2C sectors.
- Worked closely with design and strategy teams to produce cohesive brand messaging, adapting tone and style for audiences ranging from investors to consumers.

KEY PROJECTS

Mall Customer Segmentation (K-Means Clustering) · *Python · Scikit-learn*

- Built a K-Means clustering model on mall retail customer data (~200 customers), engineering features from income, spending score, and age.
- Identified 5 distinct customer segments and translated cluster profiles into targeted marketing recommendations used by stakeholders.

IoMT Vitals Anomaly Detection (Isolation Forest) · *Python · Scikit-learn · Streamlit*

- Built an unsupervised anomaly detection system on a 50,000-patient IoMT dataset of cardiovascular and respiratory vitals; EDA revealed the dataset's synthetic nature (uniform distributions, near-zero feature correlations), directly shaping the modelling strategy.
- Engineered two clinically meaningful features, Pulse Pressure and Mean Arterial Pressure, and trained an Isolation Forest on 7 features, flagging 2,500 patients (5%) as statistical anomalies.
- Validated model outputs against existing clinical alert labels, finding a 3x higher anomaly rate among patients with multiple simultaneous abnormal alerts (8.4%) versus patients with all-normal readings (3%).
- Deployed a Streamlit interface combining ML-based anomaly detection with a rule-based clinical threshold layer, providing plain-language explanations and visual organ indicators for each flagged vital.

MantlePulse — AI-Powered DeFi Behavioral Analysis Tool · *Python · Flask · Groq API (LLaMA 3.3 70B)*

- Built and deployed an AI-powered web app analyzing Mantle wallet transaction history to flag patterns linked to risky or emotional trading behavior.
- Engineered behavioral features (trading frequency, transaction timing, reaction speed, failed transactions, z-score-based unusual transaction sizes) from raw on-chain data using Python and pandas.
- Integrated Groq's LLaMA 3.3 70B with prompt engineering to generate a risk verdict, risk score, and plain-English explanation for each wallet.
- Built the Flask backend and a responsive HTML/CSS/JS frontend, integrated the Mantle Explorer API (chainid=5000) with robust error handling, and deployed the full prototype on Railway.

Kalshi Prediction Market Analysis · *Dune Analytics · SQL*

- Conducted an end-to-end analysis of Kalshi prediction market activity using Dune Analytics, building dashboards tracking transaction activity, cumulative trading volume, and market trends across NBA, Bitcoin, and Ethereum markets.
- Performed comparative analysis to identify user engagement patterns and seasonal trends, synthesizing findings into an actionable analytical report.

Ronin Network User Segmentation & Retention Dashboard · *Python · Scikit-learn · Streamlit · Dune Analytics*

- Queried on-chain transaction data to build a multi-model segmentation system, implementing and comparing 4 clustering algorithms (K-Means, Mini-Batch K-Means, Agglomerative, DBSCAN).
- Deployed an interactive Streamlit dashboard visualizing cluster profiles, enabling product teams to identify high-value users and design targeted retention strategies.

Spotify Hit Predictor (Nigerian Music Market) · *Python · Scikit-learn · SHAP · Jupyter Notebook*

- Trained a Random Forest classifier on a Nigerian Spotify streaming dataset to categorize tracks into Flop / Mid / Hit / Viral tiers based on audio and engagement features.
- Applied SHAP interpretability to identify the top drivers of hit songs, translating model output into insights a non-technical stakeholder could act on.

SUI Blockchain On-Chain Data Pipeline · *Python · REST API · Dune Analytics*

- Engineered an automated pipeline to extract, transform, and validate structured on-chain data from the SUI blockchain API, enabling real-time SQL-based reporting on Dune Analytics.
- Documented the full pipeline methodology to support reproducibility and future dataset expansion.

House Price Prediction Web App · *Python · Scikit-learn · Gradio*

- Trained and tuned a regression model on housing features, deploying via Gradio so non-technical users could generate real-time price predictions from custom inputs.
- Performed feature engineering, missing-value treatment, and cross-validation to optimize generalization and model reliability.

Yoruba Language Dataset Pipeline · *Python · BeautifulSoup · Pandas*

- Built a scraping and cleaning pipeline to collect and structure Yoruba-language text data from multiple websites, contributing a labelled dataset for low-resource NLP research.

EDUCATION

BSc Data Science *Sept 2024 – Present*

Miva Open University

- Relevant coursework: Statistics, Machine Learning, Data Engineering, Database Systems, Python, R, C++
